Copy and Move

Environment

x86_64, Fedora 25, Linux kernel 4.10.8-200

Compiler

- g++ (GCC) 6.3.1 20161221 (Red Hat 6.3.1-1)

Compile options

- gcc: `-Wall -Wextra -std=gnu11`

About acp

1. Creates a temporary file in the same directory of the original file with mkstemp.
2. Supports file holes.

makefile

- `make` : Compiles acp.c.
- `make debug` : Run acp and take the path of the first file in the current folder as input and copies the file to [original name]opt.
- `make clean` : Removes acp.
- `make auto` = `make && make debug && make clean`
